Point72 Recruiting Team
New York, NY

October 22, 2026

Dear Point72 Recruiting Team,

I am applying for Point72's 2027 Summer Software Engineer Internship in New York. I am a Computer Science student at the University of California, San Diego, graduating in June 2028 with a 4.0 GPA. I am drawn to the opportunity to build dependable software for trading, research, and data analysis while learning how engineering decisions support an investment firm operating in a fast-moving environment.

My strongest project, Quotaquarium, has required me to take software from an idea to production across several platforms. I shipped a native SwiftUI application for iPhone and Apple Watch through the App Store review process, implementing secure device authorization, cached network state, background refresh, structured diagnostics, and idempotent operations. I also built a companion C++/FreeRTOS system for ESP32-S3 hardware with concurrent network workers, adaptive polling, interactive rendering, and bounded persistent logs. These systems taught me to reason carefully about reliability, resource constraints, failure recovery, and the tradeoffs behind maintainable implementations.

I have also built Python software for structured data processing and service integration. My HTML-to-ePub pipeline parses and validates HTML and XML before producing standards-compliant output, while my Home Assistant integration models event-driven state and exposes it through REST workflows. Across these projects, I use Git, testing, documentation, and iterative debugging to make changes understandable and verifiable.

I would welcome the opportunity to contribute these skills to Point72's Technology team, collaborate with engineers and business partners, and deepen my understanding of scalable software in asset management. I am authorized to work in the United States without employer sponsorship and am available for the Summer 2027 internship program.

Thank you for your consideration. I would be glad to discuss how my experience building and shipping reliable software could contribute to Point72.

Sincerely,

Zhengyang Yu
